

Training-step sweep audit gap
not claim-locked

No complete matched 200/500/1000/2000-step sweep was found
in FRESH_D2D_SUMMARY_107_20260510.tsv under the strict grouping rules.

Reason: available step-like rows are unmatched by checkpoint/protocol
or lack multi-seed metadata required for claim use.

Required before plotting convergence:

1. Same model/checkpoint family across steps
2. Same analog-layer list and eval noise
3. $n \geq 5$ D2D seeds or signed rationale
4. commit, command, dataset, eval protocol, checkpoint hash
